

A GREEN AND CLEAN PROFIT-MAKING OPPORTUNITY

CARBON CLEAN OFFERS A SMART AND EFFECTIVE ADDITIONAL SERVICE TO BOOST YOUR BOTTOM LINE

The **CARBON CLEAN** unit runs entirely on water and electricity following the initial set up.

With water as raw material, and using electrolysis to produce hydrogen and oxygen, the mixed gas is cooled and filtered into the engine, fuel, air, and combustion carbon mixed together. The increased internal oxygen proportion, improves combustion, and at the same time the catalytic properties of hydrogen make it possible for combustion carbon to be gradually broken down to clear internal carbon deposits. Iain Macleod, Owner of Lavas Garage, Stornoway, has found many benefits from his recent purchase, as he explained: "One of the great aspects about the CC-16 machine is there is little to

no consumables used per vehicle, whereas competitors' products required a tin of solution for every clean. With the CC-16, there is virtually no running costs as such. Having water-based cleans is of course a huge bonus as well as being environmentally friendly and safer for our technicians to operate.

"We proudly offer our customers **CARBON CLEAN** as an additional service and is a great up-selling opportunity to earn more revenue; promoting the benefits of the clean is really very easy. We have found the vast majority of our customers who choose this service are delighted with the difference in driveability of their car. This is especially important being on a small island,

driving mostly around town at slow speeds - customers have reported their cars are smoother, quieter, more responsive and more economical."

CARBON CLEAN has also launched a new compact CC-14 machine to complement the existing CC-16 unit. Despite packing a powerful punch, CC-14 uses an economical 1.3 kW of power to produce 600 litres per hour of HHO. It measures just 65cm x 35cm x 86cm and weighs only 30 kg.

What could **CARBON CLEAN** do for your business?

NEW FOR THE WORKSHOP: DRAPER EXPERT HYDRAULIC SPRING COMPRESSOR

New to the Draper Expert range is a powerful, two tonne Hydraulic Spring Compressor, designed for the professional workshop.

This is an essential piece of equipment for the professional workshop which safely compresses springs during repair and maintenance of vehicle suspension strut and damper assemblies. Its all-steel construction securely clamps and easily compresses a multitude of coil springs for safe and speedy dismantling of suspension units.

A heavy duty, full safety cage is fitted for added user protection and the high-quality clamps and yokes are fully adjustable, securely gripping a wide range of spring configurations and diameters.

What's more, the compressor's powerful hydraulic pump provides a totally independent operation, allowing for use without the need for electric or air power sources.

The handy features don't end there, this compressor is also entirely mobile, meaning can easily be moved around the workshop, on its wheels, to the job as needed.

The Draper Expert Hydraulic Spring Compressor comes supplied with three interchangeable yokes and 30-70mm fixing jaw. As part of the Draper Expert range it's made for the trade and guaranteed to be durable and long-lasting.
